Education

2022 – 2026 **Bachelor of Science in Computer Science** Haripur, Pakistan
Pak-Austria Fachhochschule (PAF-IAST)

Technical Skills & Certifications

DevOps & Infra: Docker, Jenkins, GitHub Actions, Ansible, SonarQube, Maven, Linux (Ubuntu), Bash, Apache, SSL/TLS

Full-Stack & Mobile: Node.js, Express.js, React.js, PHP, Laravel, Livewire, Filament, C#, .NET, Flutter, Dart, JavaScript (ES6+), REST APIs

Databases & ML: PostgreSQL, MySQL, SQL Server, MongoDB, Python, TensorFlow (CNN)

Certifications: Back-End Development & APIs (freeCodeCamp), Responsive Web Design (freeCodeCamp), DevOps & CI/CD Systems Training

Experience

Software Engineer Truck It In (Private) Limited | *2026*

- Developed and maintained production enterprise modules using **PHP, Laravel, Filament, and Livewire** to streamline internal logistics, accounting, and HR operations.
- Collaborated with finance and operations stakeholders to translate business rules into automated system workflows, eliminating manual spreadsheet tracking and duplicate data entry.
- Audited and refactored legacy ERP components to resolve integration bottlenecks and enforce strict database relational integrity across departmental modules.

Applied Software Development Trainee ATS AI Lab | *Summer 2025*

- Managed multi-environment release workflows using structured **Git branching strategies**, reducing merge conflicts across team deployments.
- Integrated automated static code analysis into pre-deployment pipelines and diagnosed runtime logs to debug REST API and database bottlenecks.

Backend Developer Digital Empowerment Pakistan | *Jul 2024 – Aug 2024*

- Engineered scalable **RESTful APIs** using **Node.js and Express.js**, implementing custom middleware for request sanitization and centralized error handling.
- Designed and indexed **MongoDB and MySQL** schemas to optimize query execution times and support concurrent read/write operations.

Frontend Developer Hazara University Mansehra | *Aug 2023 – Oct 2023*

- Built responsive, cross-browser web interfaces using **HTML5, CSS3, and JavaScript (ES6+)**, developing reusable UI components for university portals.
- Reduced client-side page load times by minifying static assets and optimizing DOM rendering paths.

Projects

Aureus ERP – Accounting & HR Workflow Integration Laravel, Filament, Livewire, Google Drive API

- Engineered automated bank statement import parsers, ledger reconciliation workflows, and dynamic financial statement tagging within the Aureus ERP architecture.
- Built an automated document synchronization pipeline integrating the **Google Drive API** to centralize accounting records and audit trails.

Automated CI/CD Pipeline & Linux Server Infrastructure Ansible, Jenkins, SonarQube, Linux

- Automated multi-server provisioning and configuration management using **Ansible Playbooks**, ensuring reproducible staging and production environments.
- Deployed **SonarQube** on Ubuntu Server for continuous code inspection and configured **Apache Virtual Hosts** secured with SSL/TLS certificates.

Point of Sale (POS) & Fleet Dispatching Infrastructure C#, .NET, SQL Server

- Architected transactional billing and real-time inventory synchronization workflows using **C#, .NET, and SQL Server** with ACID-compliant queries.
- Built a fleet dispatching and route-management module to automate vehicle scheduling, reduce manual coordination, and improve delivery tracking.

Fabric Classification Mobile Application (Final Year Project) TensorFlow, Flutter, Deep Learning

– Trained a custom **Convolutional Neural Network (CNN) in TensorFlow** to classify textile patterns and detect fabric types from camera images.
– Implemented dataset preprocessing and image augmentation pipelines to prevent overfitting and achieve reliable inference accuracy on mobile devices.

Asynchronous Weather Forecast Mobile Application Flutter, Dart, REST APIs

– Developed a cross-platform mobile application in **Flutter and Dart**, integrating third-party REST APIs with asynchronous JSON parsing and network error handling.
